

Main Features

- **High Quality materials and surface treatments** are used in the construction of this pump to ensure extended operational life. Incorporating Stainless steel fluid sections, ideal for waterbourne, solvent based and other paints.
- **Horizontal Short Stroke Design** - Equal thrust on both pistons provide identical flow and pressure for both strokes. Permits a higher cycle rate than conventional vertical Pumps and thus more flexibility for paint flow range.
- **Reciprocating drive** – achieved by a sliding carriage mechanism and rotating constant velocity cam with special profile reducing fluid pressure fluctuations to a minimum. (No surge chamber required)
- **Fluid Seal** – Piston seal is lubricated by paint on both sides, increasing seal life. Design means No external paint leaks when seal needs replacement.
- **Bellows seal** - No exposed shaft seal packing eliminating the need for maintenance and lubrication of the shaft packing. Vital to the user when pumping Light (UV) and Moisture sensitive (Catalyst) materials.
- **Fluid Sections** - Tungsten carbide ball seats & ceramic coated pistons, ensure maximum operating life between servicing providing capability for pumping aggressive and abrasive materials.
- **Flow Rate Control** – The operating speed is adjusted by a Standard AC frequency inverter to achieve a usable speed range between 10 and 40 cycles/minute; control is infinite within this working range, either manually or automatically.
- **Operation Mode** - Simple Flow Mode like a conventional air motor driven pump or by Pressure Control to achieve maximum 'Smart' energy savings.
- **Fluid Connections** - Sanitary Inlet and outlet connections, guarantee a smooth internal pipe connection without paint entrapment pockets.

????????

The E2-15 smart pump uses a standard EExd 4 pole AC electric motor to drive the fluid section, for pumping paints, solvents and other suitable material

The unit combines conventional electrical hardware to achieve optimum operating performance at a lower cost. Running costs are much lower than compressed air driven models. When used with an optional smart card even higher savings in running cost can be realised, by running in a open or closed loop mode which delivers the paint to the user point at the correct pressure and volume only when needed.

The Model E2 Electric Pump achieves a reciprocating drive by using a cam and cam followers combined with a sliding carriage unit. Equal thrust on each stroke together with the special cam profile reduces fluid pressure fluctuations to an absolute minimum.

Specifications

????????	Unit
Nominal stroke	50mm / 1.97"
Part Number	104017 (EU) 104018 (USA) 104019 (Japan)
Max fluid pressure	20 Bar / 290 psi
Fluid output @ 20HZ (10 cycles per minute)	3.75 Litres / 1.0 US Gal
Fluid output @ 80 HZ (40 cycles per minute)	15 Litres / 4.0 US Gal
Fluid Connections	Inlet and Outlet - 1" Sanitary
Gearbox Ratio	56:1
Electric Motor	EU/Japan:400V 3PH 0.75 Kw @ 50HZ 4 Pole USA:400V 3PH 1.0 HP @ 60HZ 4 Pole
Total weight of pump	78 kg (172 lbs)

Accessories

Part. No.	????????
192800	Smart Card
502371	Electrical Panel for Single Pump Operation
192206	1" Sanitary Gasket
192547	Pressure Transducer (4-20mA / 0-25 Bar)
502144	Pressure Switch Range 2-40 BAR
192720	Sensor Mounting Manifold 1½" Sanitary
104047	Pressure Relief Valve - 1" Sanitary
